EDUCATION

Master of Science in Computer Science, University of Massachusetts - Amherst **September 2024 – May 2026**
Coursework: Software Engineering, Network Security, Statistics, Data Science, Machine Learning, GPA: 3.85/4.0
Information Retrieval, Optimization, Reinforcement Learning, Systems for Deep Learning
Bachelor of Engineering, Sri Krishna College of Technology [Anna University] **August 2018 – May 2022**
Coursework: Problem Solving using C, Data Structures & Algorithms CGPA: 8.69/10

SKILLS

Languages: TypeScript, Python, Go, Java, JavaScript, SQL || **Frontend:** React, Next.js, React Native, HTML/CSS, Tailwind
Backend: NestJS, Node.js, FastAPI, REST APIs, gRPC, Microservices Architecture
Databases: PostgreSQL, MongoDB, Redis, Prisma ORM, Drizzle ORM
Cloud & DevOps: AWS (ECS, Fargate, S3, ECR, ALB), Docker, Kubernetes, CI/CD (GitHub Actions)
ML & Data: XGBoost, Scikit-learn, MLflow, SHAP, Pandas, NumPy || **Monitoring:** Prometheus, Grafana
Tools & Methodologies: Git, GitHub, Bitbucket, Jira, System Design, Distributed Systems, Agile/Scrum

WORK EXPERIENCE

Application Developer Intern – Full Stack & DevOps **July 2025 – Present**
Parla Dynamics Inc. – Suruty Mail & FrontPage **McLean, VA / Remote**

- Deployed cloud-native microservices on AWS (ECS Fargate, ALB, ECR, Route 53) using JWT authentication and multi-stage Docker workflows, reducing deployment time by 40% through automated environment configurations.
- Led end-to-end backend development supporting 145+ REST APIs and 30+ relational tables (MySQL/PostgreSQL), optimizing database queries to reduce average response time by 35%.
- Designed distributed mail ingestion and synchronization pipeline (IMAP UID deduplication, RFC 5322 parsing) and implemented Gmail-style conversation threading for scalable message retrieval.
- Engineered CI/CD pipelines and integrated Google Cloud NLP, Vision, and Video Intelligence APIs for automated content moderation, classification, and translation across 16+ languages, processing 50k+ documents monthly.
- Strengthened security and operational reliability by implementing AES-256-GCM encryption, JWT/2FA-based authentication, multi-stage Docker workflows, and fallback deployment procedures during CI/CD disruptions.

Member Technical Staff - Software Developer **May 2022 - Mar 2024**
Zoho Corporation - Enterprise Business Solutions **Chennai, India**

- Delivered customized enterprise CRM solutions for 5+ Fortune 500 clients across financial services and healthcare sectors, reducing processing times by 50% and saving ~\$200k annually in operational costs through workflow automation.
- Spearheaded development of a Configure-Price-Quote (CPQ) system, digitizing field operations and reducing manual effort for client engineering teams by 50% through workflow automation and system redesign.
- Designed and implemented REST-based integration solutions in collaboration with middleware teams, reducing manual data handling by 40% and improving cross-system data consistency.
- Built and deployed 20+ interactive dashboards and analytics reports using Zoho Analytics, transforming operational data into actionable insights and increasing organizational productivity by 25%.
- Mentored 3 engineers, reducing ramp-up time by 50% through structured onboarding and development standards.

Project Trainee **Jan 2022 - May 2022**
Zoho Corporation - Enterprise Business Solutions **Chennai, India**

- Implemented CRM Plus solutions and backend customizations using Java, Python, and REST APIs as part of training.
- Developed React.js components and worked with cross-functional teams to create client-specific workflow solutions.

PROJECTS

- **Multi-Tenant Internal Tool Platform** - Architected scalable multi-tenant SaaS platform with dynamic schema-to-API generation enabling non-technical users to create internal tools. Implemented strict row-level tenant isolation, hierarchical RBAC, and background job queue integration; optimized database queries achieving p95 latency <120ms under load.
- **Distributed Job Queue (Go)** - Built fault-tolerant distributed job queue in Go processing up to 50K jobs/sec with two-layer idempotency (Redis + PostgreSQL), exponential backoff retries, and dead-letter queues; integrated Prometheus/Grafana monitoring and validated 10K enqueue/sec throughput.
- **Fraud Detection ML System** - Built end-to-end fraud detection ML system with cost-sensitive learning optimizing business outcomes (fraud-loss vs. false-decline cost optimization). Achieved 80% recall at 70% precision on imbalanced dataset (0.2% fraud rate); implemented SHAP explainability, A/B testing framework, and drift detection with real-time inference API (<50ms p95 latency).
